## Projects

### Tour-India Booking System Website

- A simple Tourism Website Portfolio which shows travel destinations across various part of Country. This theme is made using Bootstrap features several content sections, a responsive portfolio grid (tourist-places), window modals for each portfolio item, Blogs section and AboutUs Section.
- Provided insightful historical and cultural context about various destinations, enhancing visitors' understanding and appreciation of India's rich heritage.
- Managed logistics such as transportation, accommodations, and schedules, ensuring that tours ran smoothly and efficiently.
- Addressed customer inquiries and resolved any issues promptly to maintain high levels of guest satisfaction.
- Developed themed tours covering specific interests such as religious sites, culinary experiences, and adventure trails.

### Portfolio Website for Personal

- Highlight your core expertise, passion, and career objectives. Keep it concise and compelling. A passionate and dedicated web developer with over 5 years of experience in creating dynamic and user-friendly websites. Skilled in HTML, CSS, JavaScript, and React, I thrive on turning complex problems into elegant solutions..

### Weather App Using API

- Developed a robust weather application utilizing external APIs to fetch real-time weather data from multiple reliable sources.
- Integrated a user-friendly interface that displays dynamic weather conditions, forecasts, and alerts.
- Implemented advanced features such as geolocation, customizable weather widgets, and interactive maps.
- Employed best practices for API consumption, including error handling, caching, and rate-limiting to ensure seamless user experience.
- Optimized the app for performance across various devices and operating system.
